## RIVER AND LAKE RESERVES

N. A. Domanevskiy

TABLE OF CONTENTS

## Introductory Note

## PART I. THE ELEMENTS OF RESEARCH

## Chapter 1. The Geodetic Basis of the Surveys

## 1. General aspects

## 2. Basic traverses and polygons

1. Reconnoitering locality for the selection of angles and sides of the traverse
2. Fixing the traverse
3. Measuring the traverse length and dividing the traverse into numbered parts
4. Reducing the lines to the observer's horizon
5. Correction to tape measures for temperature
6. Errors in tape measuring
7. Establishing a traverse across a river
8. Measuring the traverse angles
9. The precision of angle measurements with the aid of a theodolite
10. Directional angles and the convergence of meridians
11. Varieties of plan layouts with the aid of traverse lines

Traversing with transit

Theodolitic-range-finding traversing

Plane-table-range-finding traversing

12. The computation of the coordinates and the superposing of the traverse on plane-table

Computation of coordinates

The coordinate grid and the construction of the polygon

13. The Gauss-Kruger coordinates

### 3. Triangulation

1. General data
2. Laying out triangulation nets
3. Composition of triangulation work
4. Reconnoitering of locality
5. Types of triangulation markings, turning points and their arrangement
  - Markings
  - Turning points
6. Bases and their measurement
7. Measuring lines with the Invar striated tape
8. Measuring lines with steel striated tapes
9. Corrections for tape tension, temperature and slope of terrain
  - Correction for tape tension
  - Correction for temperature
  - Correction for slope
10. Computing the length of the base
11. Measurement of horizontal angles
  - Measurement of horizontal angles by correlated adjustment of the transit circular plates
  - Measurement of horizontal angles by the method of repeat sighting
12. Centering and reduction

### 13. Precision of triangulation work

Errors in horizontal angle measurements

Observer's personal errors

Errors of the instrument

Errors in centering instrument

Errors in installing surveyor's stake

### 14. Computation of triangulation

### 15. Computation of coordinates

### 16. Graphic triangulation (geometric grid)

## 4. Polygonometry

### 1. General aspects

### 2. Types of polygonometry

Parallax polygonometry

Optical (long-range) polygonometry

### 3. Equalization of the polygonometric net

## 5. Tie-in with the State Geodetic network

### 1. The Potentot problem

### 2. The Hansen problem

## 6. Locating the center

## Chapter II Network of Elevations

### 1. General aspects

### 2. Bench marks of leveling network of the III and IV classes

#### 1. Permanent bench marks

#### 2. Temporary bench marks

### 3. Leveling of the III class

1. Instruments used
2. Procedures in leveling of the III class
3. Divergence between "foresight" and "backsight" lines
4. Leveling (III class) across obstacles

#### 4. Leveling of the IV class

1. Instrument requirements
2. Procedures in leveling of the IV class
3. Degree of precision in leveling of the IV class
4. Leveling of the IV class across obstacles
5. Leveling of the V class
6. Reduction to sea level
7. Determination of the elevations of points in a geometric net
8. Elevation markings of plane-table and tacheometric lines

### Chapter III Surveying a Locality

1. Plane-table surveying
2. Tacheometric surveying
3. Compass-level surveying
4. Cross-section levels

### Chapter IV Water-Surface Leveling

1. Determination of water-level mark
2. Determining the momentary water-level mark
3. Determination of the longitudinal profile of the water surface by floating leveling rod

## Chapter V Depth Measurements

### 1. Instruments for depth measuring

1. General data
2. Graduated measuring rod
3. Hand-operated sounding rod
4. Fish-like sounding rod
5. Measuring frame
6. Automatic measuring instruments

Hydrostatic instruments

Rigid-rod instruments

Echo-measuring rods

### 2. Depth measurements

1. General aspects
2. Measuring with cable
3. Measurements fixed by intersections
4. Establishing intersections with the aid of a plane table equipped with a telescopic-sighting alidade
  - Measuring by transverse profiles
  - Measuring by sloping cross-lines
  - Measuring by longitudinal lines of direction
5. Intersecting the measurements with the aid of sextants

### 6. Winter depth measurements from the ice surface

### 3. Trawling with rigid trawl-line

### 4. Processing the depth measurements

1. Selection of conditional level
2. Computation of the recession in the water level
3. Computation of the recession of the depth measurements

4. Simplified method for determining water-level recession
5. Processing depth measurements
6. Laying-out plan by instrument-established intersections
7. Laying-out plan by sextant-established intersections

Chapter VI Pantographing

PART II OPERATIONAL RESEARCH

Chapter I Types of Operation Research

Chapter II Water Meter Observations

Chapter III Systematic Determination of Longitudinal and Transverse  
Water Surface Slopes

Chapter IV The Plan and Elevation Representation of Surveys

Chapter V Reconnoitering the Area under Survey

Chapter VI Laying-out, Measuring, Fixing, and Surveying the Traverse

Chapter VII Depth Measurements in the Surveying of Sandbanks

Chapter VIII Surveying the Above-Water Relief

Chapter IX Determining Directions and Velocities of Current

Chapter X Processing Research Data

1. Processing the results of depth measurements
2. Processing the data obtained by observations from floats
3. Specifications to be followed in plan lay-outs

Chapter XI Marking-Off the Lines of Direction for the Work of  
Channel-Deepening

Chapter XIII Correction of Pilot Charts and River-Navigation  
Charts

Chapter XIII Additional Data for the Organization and Procedure  
of Field Surveying Research Parties

### PART III RIVER CHANNEL INVESTIGATIONS

Chapter I Problems in River Channel Investigations

Chapter II Reconnoitering the Operational Section

Chapter III Work of Surveying and Measuring

1. General aspects
2. Periodic measurements of channel and combination of plans
3. Longitudinal channel measurements

Chapter IV Observations Recording the Erosion of River Banks

Chapter V Observation of the Changes in the Water Horizons and  
Surface Slopes

Chapter VI Hydrometric Surveying

1. Determination of the velocity of current
2. Processing Hydrometric observation data

Chapter VII Observations Recording the Movement of Alluvial  
Deposits

Chapter VIII Observations Recording the Ice Cycle

## PART IV CONTINUOUS INVESTIGATIONS OF RIVERS

### Chapter I Reconnoitering (Itinerary) Investigations of Rivers

1. General aspects
2. Compass and visual reconnoitering from a small boat
3. Determination of current velocity and water discharge
4. Compass-long range reconnoitering
5. Itinerary surveying - instrument reconnoitering
6. Barometric leveling

### Chapter II Preliminary (Simplified) River Investigations

1. General aspects
2. Itinerary tours
3. Channel surveying
  1. Basis of surveys
  2. Surveying the river channel
  3. Investigation of river valley bottomland
  4. Office processing of channel-surveying data
4. Depth measurements
  1. Making and marking the measurements
  2. Processing the depth measurements
5. Geological surveying
  1. Composition of geological investigations
  2. Geomorphological reconnoitering
  3. Itinerary geological surveying
  4. Shallow drilling
  5. Searching for local building material sources
  6. Laboratory research
  7. Elements of office processing

## 6. Hydrological observations

1. Purpose and composition of hydrological data
2. Reconnoitering hydrological investigations
3. Arrangement of water-gauging observation points and observation procedures
4. Temporary hydrometric stations and their operation
5. Channel observation points and observation procedure
6. Other work involved

## Chapter III Detailed (Final) River Investigation

1. Composition of work
2. Preparatory work and itinerary rounds
3. Hydrographic surveying
  1. Plan and elevation lay-outs
  2. Making surveys
  3. Depth measurements
  4. Trawling work
  5. Office processing of depth measurements
4. Hydrological investigations
5. Geological and other investigations

## Chapter IV Plotting the Longitudinal Profile of the Current Velocities

## PART V INVESTIGATION OF LAKES

### Chapter I General aspects

### Chapter II Geodetic and Topographic Surveying

### Chapter III Measurement Procedures

1. General aspects
2. Depth-measuring instruments
3. Laying out a measured cross-section
4. Depth-measuring procedures
  1. Measurements along lines of direction with intersection established by sighting with angle-measuring instruments located on the shore
  2. Intersection of measurements by sextant observations
  3. Depth measurements with floating chain
  4. Measurements by cable
  5. Winter depth measurements from the ice surface
  6. Processing results of measurements

### Chapter IV Hydrological Observations

1. Water-gauging observations
2. Observation of current
3. Study of alluvial deposits
4. Observation of water disturbances
5. Study of the phenomena of close-in and recession of water
6. Water transparency and color determination
7. Water temperature observations
8. Ice cover investigation

## PART IV THE PREPARATION OF PILOT CHARTS, NAVIGATION MAPS, AND THE HYDROGRAPHIC DESCRIPTION OF RIVERS

### Chapter I The Preparation of Pilot Charts

1. Purpose and content of pilot charts

## 2. Elevation lay-out of pilot charts

Determination of minimum water level

## 3. Plan lay-out of pilot charts

## 4. Composition of pilot charts

## 5. The longitudinal configuration of a river

# Chapter II The Preparation of Navigational Maps

# Chapter III Hydrographic Descriptions

## 1. General aspects

## 2. Reconnoitering schedule

## 3. Systematic schedule

## 4. Complementary schedule

## 5. Organization of hydrographic observations

# PART VII THE ELEMENTS OF THE LAY-OUT OF STRUCTURES

# Chapter I Carry-Over into the Nature of Designed Engineering Structures

## 1. The geodetic preparation of a project

## 2. Corrections to compensate for plan deformations (deformations in the drafting paper)

### 1. The polar method

### 2. The method of intersection

## 3. The basic methods of carry-over of projects from the drafting board into being

## 4. Carrying-over onto the locality the lines of the designed length

## 5. Carry-over and construction of angles of the designed magnitude

## 6. Carry-over into being the markings from the drafting-board design

1. Carry-over of an individual point
2. Carry-over of a line of a given inclination
3. Carry-over of design planes

## Chapter II Layout of Curves

1. Elements of a Curve
2. Designation of intermediate points
  1. Method of coordinates
  2. Method of consecutive chords
  3. Curve layout tables

## Chapter III Carry-over of Pickets (Points) onto the Curve

## Bibliography
